Application using JSP is a text book and reference for the people who wish to learn and develop a Java based web and enterprise application. It covers all the major topics in JSP. By providing more examples and programs, the learner can develop a fully-functional web application. All the programs are developed and tested with major IDE. First it takes the learner into the world of web application development through the

introductory chapter. Later on the JSP is introduced to the learner to make the server-side scripting easy and elegant. Two chapters have been dedicated entirely for database handling through JSP using JDBC and Hibernate. MVC is given to let the learner to integrate features of Servlets and JSP. Producing the HTML page is not the only way for outputting the results of the web application, so two chapters are allotted to teach the learners to output the results of the

the promise of perfect interoperability, lower costs, and increased efficiency finally going to be fulfilled? Should you jump in now, or wait? Following the groundbreaking P2P Networking Overview from O'Reilly Research, Planning for Web Services guides tech executives and managers through the inflated claims, competing standards, and acronym soup to arrive at a realistic appraisal of Web Services' potential for your business. Through plainspoken, impartial analysis, Planning for Web Services maps out the current state and future prospects of this still-evolving

technology, and lays out the critical technical and business issues you'll need to consider. After defining the scope of Web Services, the report looks at how they are being implemented today, and where and how they are likely to take hold in the near future. Topics include: How Web Services can replace EDI Using Web Services as middleware to create network-aware applications with RPC Advantages and hurdles to implementing Web Services on Intranet, Extranet, and public Internet sites Planning for Web Services profiles more than 30 of the key players in this

Application Servers 2000 Jesse Feiler
Application servers are the present and future of Web-based enterprise. As the software link between browsers and other client applications and companies' internal databases and legacy systems, they enable a wide range of complex online interactions-by dynamically generating catalogs, accepting and processing orders, updating customer or employee data, and retrieving and presenting other requested

information.
Application Servers: Powering the Web-Based Enterprise gives technical and managerial IT professionals a comprehensive view of this increasingly critical technology, all from a vendor-neutral perspective. Inside, readers learn successful strategies for building large-scale Web applications that take full advantage of their application server's diverse capabilities. This book is an essential resource for all businesses investing in the Web as a medium for interactions with employees, vendors, customers, or partners.
